

PLEASE SUBMIT THE FOLLOWING INFORMATION WHEN REQUESTING A CUSTOM WINDOW WELL COVER

HOW TO SIZE YOUR CUSTOM WINDOW WELL COVER

If one of our standard sized covers does not fit your window well a custom window well cover can be made for you

There are two options to sizing your window well cover:

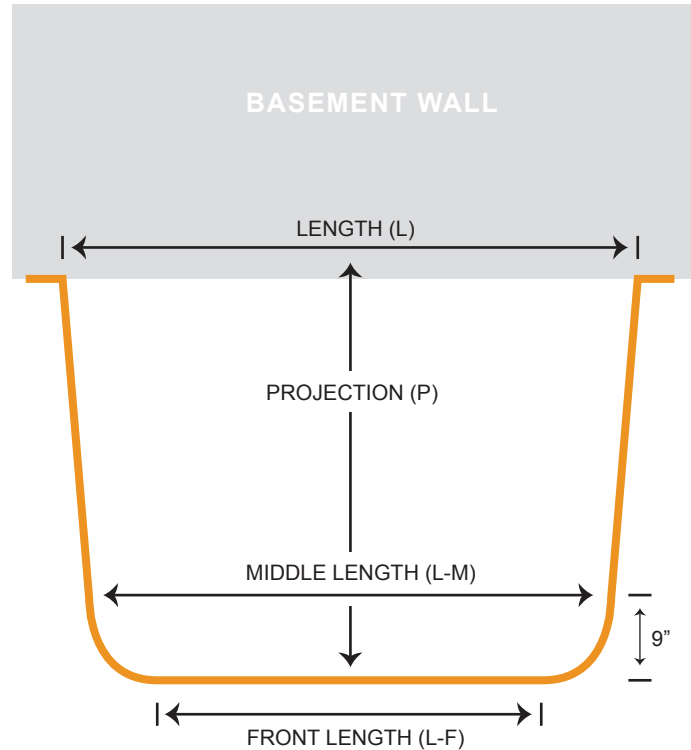

a) Template Method

1. Place wrapping paper or cardboard on top of your window well
2. Trace the outline using a marker.
3. Provide us the template and any additional information

b) Measurement Method

Please refer to the sketch and record your measurements in the table /chart.

1. Measure length 'L' of your window well where it is connected to the house from outside edge to outside edge. Do not include length of the flanges in your measurement.
2. Measure projection 'P', at midpoint of the window well. This is the distance from the basement wall to the outside of the window well.
3. Measure the front length 'L-F', at the front of the window well. This should be the flat section between the radius bends.
4. Measure the middle length 'L-M'. This should be measured 9" back from the front of the window well.

NOTE: Window well covers are made 2" larger than window wells to allow for some overlap.

	QUANTITY	LENGTH 'L' (INCHES)	PROJECTION 'P' (INCHES)	FRONT LENGTH 'L-F' (INCHES)	MIDDLE LENGTH 'L-M' (INCHES)	ANY OTHER INFORMATION
